

untxt does the **painful part** of bookkeeping: the data entry.

Your clients send you a pile of receipts, invoices, bank statements, and blurry phone photos, often crammed into one big PDF. **untxt reads every page, splits it up, sorts it, and types out the numbers**, lined up for QuickBooks or Xero. You just check the few it isn't sure about.

→ HOW IT WORKS

→ ONE MESSY FILE IN, CLEAN RECORDS OUT

- Zero setup**
No templates, no rules, nothing to train or maintain.
- Works on day one**
Your first document works like your thousandth.
- You stay in control**
It never posts on its own. Nothing hits your ledger without you.

- Encrypted** in transit & at rest
- Never** used to train AI
- Delete** anything in one click
- Handwriting gets **flagged, not guessed**
